

Flood Control Products

FIBC Bag Flood Walls and Sandbags

Flood control works when planned for in advance. Sandbags provide durable flood control and mitigate water damage from flooding. Used along homes, businesses, and riverbanks, sandbags limit the flow of water because of the strong material used to make them.

Large sites need extra flood protection. Coated flexible intermediate bulk containers (FIBC) offer increased mitigation in the event of an emergency. Bulk bags are frequently used on construction sites to redirect flood waters. Because of their size, bulk bags are highly visible and necessary for large-scale flood protection plans.

Protection Against Flash Floods and Water Surges

FIBC Bulk Bags

FIBC flood protection walls are most effective when needed for intense flood control. Coated bulk bags significantly reduce the amount of moisture in the wall. Capacities for coated FIBC bags can range from 2,500 to 4,000 lbs. All bulk bags have corner or cross-corner lift loops to allow pallet jacks or forklifts to move them.

FIBC bulk bags have a variety of applications. They can form a trench to direct flood waters away from livestock and buildings, and FIBC flood walls can be placed around at-risk buildings and homes to ensure flood waters are stopped when they do rise. To add further strength to riverbanks and shorelines, bulk bags can be placed on slopes and around ponds.

FIBC bulk bag benefits:

- Coated for moisture control
- Heavy flood protection
- Sift-proof seams
- Made in the USA

Sandbags

Sandbags effectively limit the flow of floodwaters around homes and businesses. Sandbags are made using high UV poly or burlap. A standard sandbag case comes with 1,000 sandbags and ties to close them. They also come in a variety of sizes: 14.5 x 26" poly w/ tie, 18 x 30" poly w/ tie, and 17" x 30" burlap. Sandbags work parallel to the flow of water with the top part of the bag folded under.

Sandbag capabilities overview:

- Lightweight, easy to move
- Placed around homes, riverbanks, and storm drains
- Forms strong, effective flood barrier
- Comes in variety of sizes, colors, and materials
