25’ vs. 100’ Fire Hose Performance Comparison

With the 100’ hose, the water has a longer distance to travel. The water pressure drops significantly over that distance, and ends up coming out of the nozzle with less force than with the shorter hose. However, not all jobs are the same, and certain situations you may want the extra hose length. We can help though. Tell us how you intend to use the firehose, and we’ll help you decide which one will best fit your needs!
