

Spring Berm

Prevents erosion in gullies, swales, and ditches

The Spring Berm Erosion Guard is built to prevent erosion in gullies, swales, and ditches. Our product reduces and counteracts the amount of silt and sediment within the jobsite, slowing the water down and avoiding erosion. The lightweight and durable green mesh is built to retain the silt while the heavy-duty steel wire provides a solid structure for the product. The Spring Berm is not only built to withstand but, it also is built to become a compressed unit, making the product easy to store. This can be done by attaching all four clips on the ends of the Berm. These clips also double as an attachment piece to connect multiple Spring Berms together for maximum coverage. When ready for use, the Spring Berm springs into action swiftly opening ready for action. Once you have the Spring Berm in place, you can hold down its skirt in place with either rocks, dirt, or stakes.

Spring Berm

Prevents erosion in gullies, swales, and ditches

Features

- Green Polyester Fabric
- Black Polypropylene Skirt
- Expandable Heavy Duty Steel Springs
- Limits erosion by retaining silt and sediment

Benefits

- Quick and Easy Installation
- Versatile Erosion Control
- Lightweight and Compact for Storage or Transporting
- Connectable product increases coverage

Spring Berm

Prevents erosion in gullies, swales, and ditches

WARNING:The Ultra Spring Berm opens swiftly once detaching the clips because of the heavy-duty steel wiring inside the product. So, err on the side of caution when opening the Berm.

To begin opening this product, start by detaching the clips, using one hand to hold the Spring Berm together and the other to unsnap the clip. For the last clip, we suggest using two hands to keep the unit closed when detaching the fourth clip.

Once you have detached the four clips, slowly release the Berm letting it spring open and expand.

Connecting Multiple Units:

To maximize coverage with the Ultra Spring Berm, you can connect the Guards together extending the width of the product.

Extending the product can be completed by attaching the four male portions into the four female portions connecting the product. For this to work properly, make sure to connect all four of the clips.

Securing:

When securing the Ultra-Erosion Guard, you can simply use common blanket staples by inserting them through the flap on the product or compile gravel onto the flaps.

This product can alternatively be secured with wooden stakes. You can do this by staking every corner of the flap along with the middle of the flaps on the back and front. This will keep the Berm in place.
